

Save the Date

2022 NADP Fall Meeting and Scientific Symposium *Monitoring for a Sustainable Future*

November 14-18, 2022

Knoxville, Tennessee

University of Tennessee Conference Center/Hyatt Place Knoxville Downtown

November 14-15: Technical and Science Committee Meetings

November 16-17: Scientific Symposium

November 18: Optional Field Trip – Great Smoky Mountains National Park

Reduced registration fees for students and virtual attendees. Call for abstracts will be announced in June 2022. The website will be updated as details become available.

About the Scientific Symposium

The theme of the 2022 National Atmospheric Deposition Program (NADP) Scientific Symposium is *Monitoring for a Sustainable Future*.

NADP is a dynamic, long-term partnership of federal, state, tribal and local governmental agencies, educational institutions, private companies, and non-governmental organizations. NADP facilitates robust research on atmospheric monitoring and modeling to provide information on multi-pollutant source/receptor relationships, deposition effects on terrestrial and aquatic ecosystems, and biogeochemical cycling of elements.

Major topics to be discussed at the 2022 Scientific Symposium include:

- Diversity, equitability, and inclusion in air quality monitoring; serving urban and rural communities; promoting public awareness and access to information and decision-making
- Deposition monitoring for science-based management of air pollution in a changing world; applications of critical loads to sustain biodiversity and ecosystem services
- Deposition monitoring to assess and address chemical contamination of the environment
- Tracking emerging pollutants and climate change indicators
- Links between reductions in deposition and climate resilience
- Mercury deposition and effects
- Technological advances in deposition measurements and monitoring
- Advances in atmospheric chemistry and deposition modeling and critical loads
